ERROR when running report:

error running report- org.hibernate.exception.genericjdbcexception: could not execute query

FIX:

DB needs to be upgraded, call support at 800 896 7035. You may need a support contract.

Note: This can happen when you upgrade to a new version and did request support to upgrade your db. Basically, a mismatch of the new version versus your old version which your db copy/backup originated from.
