AMANO.

Introduction

Amano recommends using the following steps to load/install a USB CommStik driver into Windows 7. This procedure is specific to Windows 7, but the same method can be applied to other Windows operating systems.

Follow this procedure;

1. Click CommStick.zip to download a file ([CommStick.zip](#)).
2. Open the zip file.
3. Run the application cdm inside.
4. Right click on "My Computer" and select Manage > Device Manager > Ports to find out the port number for the USB CommStik or USB serial adapter.
5. From Time Guardian Menu, click on Edit > Wizard Setup > Clock tab > and Yes to Configure Your Terminals?
6. Click on the Location/Terminal button and from the Location Connection screen change the Com port number to the appropriate number obtained in step 4.

Conclusion

Thank you for your time, and have a great day. As always, feel free to submit ideas on topics you want addressed in the Amano Knowledge Base using the comments feature.
